11 .Perform a 180-degree rotation clockwise along the y-axis for the given image

Aim

To write and execute a Python program to rotate a given image by 180 degrees clockwise using OpenCV.

Procedure

1. Import the OpenCV library.
2. Read the input image using cv2.imread().
3. Check whether the image is loaded successfully.
4. Rotate the image by 180 degrees using cv2.rotate().
5. Display the original and rotated images.
6. Press any key to close the windows.

Code

```
import cv2

img = cv2.imread("sample.jpg")

if img is None:
    print("Image not found")
else:
    rotated = cv2.rotate(img, cv2.ROTATE_180)

    cv2.imshow("Original Image", img)
    cv2.imshow("180 Degree Rotated Image", rotated)

    cv2.waitKey(0)
    cv2.destroyAllWindows()
```

SAMPLE INPUT:

SAMPLE OUTPUT:

Result

Thus, the given image was successfully rotated by 180 degrees clockwise using OpenCV
